Discharge destination	Usual place of residence

Diagnosis		Snomed Code
Diagnosis	Infective exacerbation of COPD	285381006   Acute infective exacerbation of chronic obstructive pulmonary disease (disorder)
Comment	Primary reason for admission	
Diagnosis	Hypertension	38341003   Hypertensive disorder, systemic arterial (disorder)
Comment	Secondary diagnosis and treated on this admission	

Clinical Summary
Mr Smith presented with a 3 day history of increasing breathlessness, wheeze, productive cough (yellow sputum) and low grade pyrexia (37.7 degrees Celsius). His CXR showed no focal consolidation, his CRP was 57 and his WBC was normal. He was treated for an infective exacerbation of his COPD with 24 hours of nebulised salbutamol and ipratopium and started on steroids and antibiotics. He quickly improved and was well enough for discharge on day 2.

Investigation Results	
Chest X-ray (15th April 2016)	Hyperinflated lungs consistent with the clinical story of COPD. No focal consolidation or pneumothorax seen. No focal mass seen.

	Appearances are unchanged compared to previous CXR 3rd November 2015
